[Special Feature] Expanding into India: Case Studies of Mid-sized and Small Enterprises

India has become a promising destination for Japanese companies due to its population exceeding 1.4 billion, high economic growth rate, and government policies promoting manufacturing. However, mid-sized and small enterprises in particular face various challenges including differences in business practices, compliance with legal, labor, tax, and accounting matters, securing human resources, and selecting business partners and partners. This special feature introduces case studies of mid-sized and small enterprises that have expanded into India, and explores success factors, challenges encountered, and countermeasures. Through the experiences of each company, it provides business expansion hints for companies considering future entry into India.

[Special Feature] Bottlenecks Accompanying AI Demand and Emerging New Industries

The rapid proliferation of artificial intelligence (AI) is significantly changing the world's industrial structure and trends in trade and investment. The expansion of AI demand is accelerating investment in advanced semiconductors, data centers, and communication and power infrastructure, broadening the competitive axis of the semiconductor industry toward mid- and downstream processes such as advanced packaging. Meanwhile, supply constraints in electricity, water, and human resources have emerged as issues, also promoting growth in related equipment and infrastructure markets. This special feature analyzes the impact of AI on global trade, investment, and industrial location, and explores new business opportunities emerging for Japanese companies through the

competitive strategies of major countries and regions and supply chain restructuring trends.

[Special Feature] Business Changes Through Economic Security [Additional Article] Policy Measures and Alignment with Like-Minded Countries Regarding Trade, Investment, and Technology

From an economic security perspective, countries and regions are implementing policy measures aimed at securing strategic autonomy and strategic necessity. Examples include strengthening supply chains for strategic industries and essential materials, as well as promoting domestic production relocation and local production. Trends toward attracting supply networks to their own countries through subsidies and incentive provisions are spreading. Additionally, collaboration among like-minded countries and construction of new frameworks deserve attention. Meanwhile, stricter export controls and inbound and outbound investment management are also progressing, becoming new risk factors for Japanese companies. This special feature reports on changes in trade, investment, and technology aspects that economic security brings to the local business environment.

[Special Feature] Current Status and New Challenges of Korean Companies' Overseas Expansion [Additional Article]

Due to US-China tensions, rising production costs and oversupply in China, and improving competitiveness of Chinese enterprises, Korean direct investment in China has plummeted sharply, and Korean companies' China business has become increasingly difficult. Meanwhile, Korean direct investment in the US has surged due to US industrial policies, but the outlook remains uncertain following the inauguration of the second Trump

administration. Additionally, Korean companies maintain strong interest in Vietnam as the leading "China Plus One" destination.
