【Special Feature】Diversifying Consumer Profiles in Asia-Pacific
－Interpreting Values, Lifestyles, and Market Opportunities－ ＜Additional Articles＞

In the Asia-Pacific region, consumer needs and purchasing behaviors are becoming more diverse against the backdrop of rising incomes, urbanization, and digitalization. While these changes vary by country, common trends are also emerging. This special feature examines market trends in major ASEAN countries, India, and Bangladesh, and analyzes them from the perspective of what consumers value, what consumption characteristics they have, and what factors determine their purchasing decisions, along with case studies of Japanese companies operating locally. By cross-referencing cases across countries and sectors, we identify market opportunities and business expansion hints for Japanese enterprises.

【Special Feature】Leading Universities Producing Highly Skilled Foreign Talent <Additional Articles>

In recent years, Japan's talent recruitment remains a seller's market. Particularly acute is the shortage of science and engineering talent, and companies are increasingly looking to foreign workers. Meanwhile, approximately 70% of domestic international students are liberal arts majors, with few in science and engineering fields. Against this backdrop, interest is growing in science and engineering international students studying in English and science and engineering talent enrolled in overseas universities. Additionally, more companies are seeking to hire students studying Japanese at overseas universities regardless of their major. This special feature, based on interviews with promising universities domestically and internationally that produce science and engineering talent and Japanese language learners interested in employment in Japan, introduces distinctive curricula, employment status at Japanese companies, and messages to enterprises.

【Special Feature】EU CBAM Full Implementation: Changing Competitive Landscape and Country and Corporate Responses <Additional Articles>

Full implementation of the EU Carbon Border Adjustment Mechanism (CBAM) began in January 2026. As of 2026 and beyond, target products imported from outside the EU will incur carbon pricing charges corresponding to the EU Emissions Trading System (EU ETS) applied domestically, requiring Japanese companies to take action. The introduction of carbon pricing burdens may affect Japanese companies' price competitiveness and supply chains through choices in greenhouse gas (GHG) emission reduction efforts and calculation and reporting methods. Similar system implementations are also being considered in the UK and Asian countries. This special feature introduces the latest CBAM developments and corporate response status, while exploring impacts on global supply chains and competitive landscapes.
