Daily Brief: Hormuz oil trade expected to halve by 2030

Future Hormuz significance | Global resilience buffers | US AI governance | Political costs to Zelensky | Peru trajectory upgrade | Upcoming conference calls | EG in depth

summary

- * The Strait of Hormuz will likely become less significant to global oil trade by the end of the decade.
- * The escalation of the Middle East conflict will challenge the resilience of growth and markets. global resilience buffers.
- * EG's report on US AI governance outlines how policy will remain fragmented and executive driven in the near term.
- * President Volodymyr Zelensky's dismissal of General Oleksandr Syrsky will calm protests, but he remains politically weakened.
- * Regions, countries, and sectors covered in this edition include the US, Bolivia, Brazil, Iran, Peru, Ukraine, geo-technology, and oil.

the top line

Oil—Strait of Hormuz significance for oil trade could be cut in half by 2030

- * The Strait of Hormuz is likely to become far less central to global oil trade as Gulf producers invest heavily in alternative export routes.
- * More than 10 million barrels per day of regional oil exports will likely bypass it by 2030, reducing the oil market's exposure to further disruptions in the waterway.
- * The continued threat of Iranian attacks on infrastructure and Houthi disruptions in the Red Sea suggest the risk to supply will endure, and evolve, rather than disappear.
- * Read more here . Reach out to discuss: mena@eurasiagroup.net .

Geoeconomics—Escalation in the Middle East tests global resilience buffers

- * The global macroeconomic and market impact of the Middle East conflict has proven more limited than anticipated, but the factors that contained it are to an extent one-offs that won't necessarily repeat.
- * Growth remains resilient globally, supported by AI-driven investment and fiscal tailwinds—but only provided geopolitical risks remain contained.
- * Underlying inflationary pressures are persistent across developed markets, and monetary policy is set to remain tighter than the pre-war baseline, even if oil prices fall back.
- * Read more here . Reach out to discuss: geoeconomics@eurasiagroup.net .

US, Geo-technology—US AI governance will stay fragmented and executive-driven through 2027

- * This report outlines the expected direction of US AI policy through 2027, covering national security, frontier-model oversight, federal and state legislation, and sector-specific regulation. Across all areas, a handful of key triggers—including a dual-use or cyber incident, agentic fraud, a breakthrough from China, or lobbying tied to frontier lab IPOs—could prompt sudden policy shifts.
- * The deregulatory, executive-driven approach to AI policy persists absent a triggering event that forces a Washington consensus.
- * President Donald Trump's willingness to act unilaterally on issues like model access and infrastructure means the landscape can shift quickly.
- * Congress is on the sidelines, leaving states, courts, and executive orders to form the basis of policy and governance across trade, data flows, deployment, financial oversight, liability, and infrastructure.
- * Read the report here . Reach out to discuss: geotechnology@eurasiagroup.net .

Ukraine—Zelensky's concession restores calm, but lasting political costs persist

- * Zelensky's decision to dismiss General Syrsky on 21 July and appoint General Mykhailo Drapaty will likely be received positively by both the public and the army.
- * The protests will likely fade without radicalizing, but Zelensky has emerged weakened.
- * The war effort is unlikely to suffer, but Zelensky will now have to weigh the public reaction before making major personnel and policy decisions for the duration of the war.
- * Read more here . Reach out to discuss: europe@eurasiagroup.net .

Peru—Upgrading trajectories on expected investment push and rare government stability

- * EG is upgrading Peru's short- and long-term political trajectories from neutral to positive, reflecting an improved outlook for government stability under President-elect Keiko Fujimori, who will likely complete her five-year term.

- * Fujimori's administration will likely promote investment and economic policy continuity, while a supportive congress and experienced team can help to improve execution capacity.
- * The main risks stem from strong opposition to Fujimori in several regions and among some segments of the population, which could intensify and trigger protests if she fails to improve security, responds poorly to El Niño-related disruptions, or weakens checks and balances.

Upcoming conference calls

- * 23 July 10:00 AM ET—Latin America update. Register here .
- * 27 July 9:30 AM ET—Europe update. Register here .
- * 30 July 9:30 AM ET—Brazil update. Register here .

eg in depth

Brazil—Polling biases suggest a narrower Lula lead: Brazil's presidential election will be more competitive than consensus suggests, with President Luiz Inacio Lula da Silva's runoff lead over Senator Flavio Bolsonaro probably resting closer to 2 or 2.5 percentage points rather than the current 4-point lead indicated by the average of all polls. Polls continue to have biases that have led them to historically understated support for conservative candidates, including poor likely-voter modeling, face-to-face survey bias, and a shifting respondent profile (non-response bias). Polls will likely show a tighter race as more pollsters adopt likely-voter adjustments closer to the vote. Read more here . Reach out to discuss: brazilresearch@eurasiagroup.net .

Bolivia—Paz signals progress with IMF negotiations: President Rodrigo Paz said on 21 July that his administration is making significant progress in negotiations with the IMF and that he will send "clear economic signs" in the next few days, reinforcing EG's view that an agreement is likely in the near term. The administration is anticipating \$5 billion (around 8% of GDP) in funding from different multilaterals. A recent FX unification bodes well for talks, and the currency's subsequent depreciation will increase the administration's incentives to secure a program to build buffers and have more flexibility. The fiscal adjustment path remains challenging, as does the outlook for structural economic reforms; Paz will likely need to make significant concessions to his liberalization agenda to avoid social unrest (see note , 30 June). Upcoming events:

- * 23 July: Events: Intel earnings; Central bank decision: South Africa.
- * 24 July: Events: The temporary 10% US global tariff is set to expire unless Congress extends it; Data: Eurozone, Japan, UK, and US S&P and India HSBC manufacturing PMI; Central bank decision: Russia.

The EG Daily Brief is compiled by Jens Larsen, Lucy Eve, Babak Minovi, Pietro Guglielmi, Rahul Bhatia, Marilia Sirio, Joseph Craven, Martina Silva, and Trista Kelley, with help from Marina Tavares, and Astral Betteridge.

closing quip

I think the Houthis, frankly, got snookered into this thing by the Iranians. And they were smart to stay out of it, and they should stay out of it and they should stop. We'll see what happens there. Obviously, it's not a positive development."—US Secretary of State Marco Rubio said regarding the Houthis' decision to attack Saudi ships in the Red Sea.

Explanation of Political Trajectories (ie, "Trajectories")

Eurasia Group's (EG) Political Trajectories are indicators of the net impact of political factors on the macro business environment in a country over specific timeframes. For each country, two Trajectories are provided, a short-term (6 months) and a long term assessment (24 months). Trajectories are assigned by Eurasia Group's country analysts through a structured qualitative process. Each Trajectory represents a net assessment, indicating how political changes in a country impact the macro business environment, defined as the economic and investment climate in the country. Once initiated, Trajectories are updated both periodically and as events warrant. Trajectories may be suspended from time to time if there is no active analyst opinion or analyst coverage, but the opinion or coverage is expected to resume. Trajectories can be:

Positive: Political factors in the country are anticipated to have a positive impact on the macro business environment

Neutral: Political factors in the country are anticipated to have a neutral or negligible impact on the macro business environment

Negative: Political factors in the country are anticipated to have a negative impact on the macro business environment

Disclaimers: Trajectories are solely for informational purposes and should not be relied upon as investment advice. Trajectories do not indicate asset price movements, and have no value in forecasting market prices. Trajectories are based on data and analysis we deem to be reliable; they are not guaranteed as to accuracy or completeness. The Trajectories indicate the political outlook in a single country, over time. Trajectories do not address sector-specific or city/regional political risks that are often different than the country-level outlook. Trajectories represent an analyst's net qualitative assessment of a country's political outlook. EG sales, analytic staff and products may provide analysis reflecting different opinions than those expressed by the Trajectories.
