Irish Council presidency proposes stricter emissions target for automakers

送信者: POLITICO Pro Alert 受信日時: 2026-11-05 19:03

【要点】

・アイルランド議長国がEU自動車規制パッケージの妥協案を提案し、2035年の排出削減目標を2021年比90%に設定することを提議している。

・自動車メーカーは代替燃料への投資と低炭素アルミ・鋼鉄を通じて追加排出量をオフセットすることが求められる。

・欧州委員会案に近い内容だが、欧州議会の主要委員会が支持した87.5%の削減目標やフランス・ドイツの合意した案とは異なっている。

・アイルランド案は代替燃料のみで走行する車両の新カテゴリーを設立せず、プラグインハイブリッド車の効用係数を2030年1月まで凍結する。

BRUSSELS — The Irish Council presidency's proposed compromise on the Automotive Package would keep a more stringent 2035 emissions reduction target for automakers, according to a steering note seen by POLITICO ahead of Thursday's working party meeting.

The proposal would set a 90% emissions reduction target for 2035 compared to 2021 levels instead of the current 100% reduction. Automakers would have to offset extra emissions through investments in alternative fuels and low-carbon aluminum and steel.

It's close to the European Commission's proposal for a 90% reduction but which limited offsets to alternative fuels and green steel.

The position differs from the proposal by the leading committees in the European Parliament, which earlier this week backed an 87.5% reduction target with various offsets.

It's also firmer than the compromise deal between France and Germany that proposed a 90% unconditional target.

Unlike both Parliament's draft and the Franco-German deal, the Irish presidency compromise would not establish a new category for vehicles running exclusively on alternative fuels.

That is tied to positions on the utility factor — which estimates how often a driver uses the electrical motor versus the combustion engine in a plug-in hybrid. The current measurements are based on lab data, which overestimate how much the motor is used. The Commission wants to use real-world data showing the combustion engine is used more frequently.

In exchange for not establishing a new vehicle category, the Council deal would freeze the utility actor until January 2030 — mirroring the view of the Parliament committees.
