President Donald Trump on Thursday decided against imposing tariffs on commercial aircraft, jet engines and aircraft parts, instead instructing his administration to pursue negotiations to shore up the aerospace supply chain.

“Under current circumstances and in light of future requirements of the United States, this course of action is necessary and appropriate to address the threatened impairment of the national security,” the presidential proclamation said. “Depending on the status or outcome of such negotiations, I may consider alternative remedies in the future.”

The Commerce Department launched an investigation into whether the aerospace supply chain constitutes a national security risk last May. Its final report recommended that Trump should not impose tariffs, according to the presidential proclamation issued Thursday evening.

The order is consistent with the administration’s efforts to keep most of the aerospace supply chain exempt from tariffs in trade deals it has struck over the last year, preserving a manufacturing sector that runs a trade surplus.

Background: The proclamation comes as the White House is considering whether to impose tariffs on several key industries, including drones, wind turbines and the materials necessary to make some solar panels. Trump has already imposed tariffs on several key industries including, steel, aluminum, copper, automobiles and timber and lumber.

It’s also the second investigation in a row where the administration has decided not to impose tariffs, amid a fragile trade detente with China and widespread voter concerns over affordability. The previous investigation focused on the critical mineral supply chain, an area where the administration has focused on targeted investments and trade partnerships rather than tariffs.
