JETRO Regional and Analysis Report New Arrival Notice (November 5, 2026 Issue)

JETRO NOV 5 14:50

Subject: JETRO Regional and Analysis Report New Arrival Notice (November 5, 2026 Issue)

Thank you for using the JETRO Members Service.

We bring you the latest information on regional and analysis reports prepared by JETRO with unique perspectives on the political and economic trends of major countries and regions worldwide. We hope you find these reports useful.

◆Contents◆

[Special Feature] Sustainable Packaging and Corporate Case Studies <Additional Article>

Worldwide, various regulations and voluntary initiatives are being implemented for containers and packaging to reduce waste and promote recycling or reuse. The EU's "Packaging and Packaging Waste Regulation (PPWR)" implemented in 2025 mandates that packaging be recyclable at certain rates and that recycled materials be used in plastic packaging. Even without regulations like those in the EU, companies may be required by trading partners, global companies, and overseas retailers to change packaging or use materials that are easier to recycle. This special feature focuses on sustainable packaging regulations worldwide and case studies of both packaging-related companies and companies using such packaging in their business, providing concrete ideas for companies seeking to address sustainable packaging.

◇Romania Market Progressing in Transition to Sustainable Packaging Materials

[Special Feature] Global Trends Toward Securing Energy Security <Additional Article>

Rising regional tensions surrounding the conflict between Israel, the United States, and Iran are causing serious disruptions that shake the global energy supply and demand structure. In addition to supply constraints, there is significant strain on manufacturing, consumption, and the global economy as a whole. Against this backdrop, attention is being paid to whether shortages and price increases in crude oil and natural gas will lead to accelerated deployment of renewable energy and expanded use of biofuels, or whether continued dependence on fossil fuels will persist. This special feature introduces a wide range of topics including trends in diversifying procurement sources and alternative procurement, while highlighting the progress of energy policies in each country, their impact on corporate activities, and corporate responses.

[Special Feature] Diversifying Consumers in Asia-Pacific
—Understanding Values, Lifestyles, and Market Opportunities— <Additional Article>

The Asia-Pacific region is experiencing growing diversification in consumer needs and purchasing behavior against the backdrop of rising incomes, advancing urbanization, and digitalization. While these changes vary by country, common trends are also emerging. This special feature addresses market trends in major ASEAN countries, India, and Bangladesh, analyzing from the perspective of what consumers value, what consumption characteristics they possess, and what factors determine their purchasing decisions, together with case studies of Japanese companies operating locally. By cross-reading cases across different countries and sectors, we explore market opportunities and business development insights for Japanese companies.

[Japan] Challenges in Expanding Exports of Japanese Farmed Tiger Pufferfish
Promotion and Land-based Aquaculture for Stable Supply

Japanese farmed tiger pufferfish are highly valued as a luxury ingredient both domestically and internationally, backed by advanced aquaculture technology and strict safety management systems. While domestic demand has recently declined, popularity overseas is growing. We spoke with the International Fugu Association (headquarters: Tokyo), which is working to promote Japanese pufferfish food culture and expand exports, as well as with Takase Suisan (headquarters: Saiki City, Oita Prefecture), a member company, about their initiatives to promote exports of Japanese farmed tiger pufferfish and develop overseas sales channels.

[Japan/Asia·Thailand] Small Factory with No Export Experience Opens Thai Market
Developing Original Products Leveraging Metal Printing Technology

Yashio City, Saitama Prefecture, is a region where small and medium-sized enterprises in metal products manufacturing and other industries are concentrated. Following the implementation of the factory inducement ordinance in 1960, the city developed as a hub for diverse industries centered on manufacturing. Ikegami Metal Printing, headquartered in the city and celebrating its 87th founding anniversary, is an established manufacturer handling metal printing for candy tins, tea cans, and similar products. Despite being a small company with only four employees including the factory manager and president, it is challenging the development of original products and exploration of overseas sales channels in anticipation of shrinking domestic demand. The company achieved sales at a major Thai department store starting from zero export experience. We spoke with representative director and president Chieko Ogawa about the factors behind this success.

[Europe·UK/Japan] Can National Food Appetite Be Controlled? (6)
Experts Discuss UK Food Challenges

We sought opinions from Dolly Van Talekan, a public health policy expert and researcher of UK obesity policy, regarding the "Japanese Food Strategy in the Ultra-Processed Food Era" discussed in the previous article [Can National Food Appetite Be Controlled? (5)]. She is one of the authors of the policy proposal collection "Growing Britain: Policy Manual for Improving National Health," featured in [Can National Food Appetite Be Controlled? (2)] titled "Is the UK an Overprotective State?" According to her...
